UNIVERSAL DESIGN: The Definition

Universal design is the design of products and environments to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design.

The intent of the universal design concept is to simplify life for everyone by making more housing usable by more people at little or no extra cost. Universal design is an approach to design that incorporates products as well as building features and elements which, to the greatest extent possible, can be used by everyone. While accessible or adaptable design requirements are specified by codes or standards for only some buildings and are aimed at benefiting only some people (those with mobility limitations), the universal design concept targets all people of all ages, sizes, and abilities and is applied to all buildings.

What is a universal feature? Any component of a house that can be used by everyone regardless of their level of ability or disability. Universal features are generally standard building products or features that have been placed differently, selected carefully, or omitted. For example, standard electrical receptacles can be placed higher than usual above the floor, standard but wider doors can be selected, and steps at entrances can be eliminated to make housing more universally usable.

The composition of our population is changing. Many people are surviving permanently disabling accidents and illness and even more are living longer. It would seem logical that the spaces built to accommodate this population must, by necessity, change also.

The building and design industries have responded to this need for change by producing special products and spaces for special groups. But "special" is often synonymous with "expensive". Specialization leads to complicated building standards and products which, in the end, seldom meet the needs of more than a fraction of those they were meant to help and often seem to stigmatize and separate them further from other people.

Universal design succeeds because it goes beyond specialization. The concept promotes designing every product and building so that everyone can use them to the greatest extent possible – every faucet, light fixture, shower stall, public telephone, or entrance. Universal design is a revolutionary but practical leap forward in the evolution of building and design procedures. When designers and manufacturers seize this concept, universal design will become common, convenient, and profitable.

98.

Excerpted from <u>Universal Design: Housing for the Lifespan of all People</u>, by Ron Mace for the U.S. Department of Housing and Urban Development, 1998.

UNIVERSAL DESIGN Features in Housing

The following list of characteristics are elements, features, ideas or concepts that contribute to or can be components of universal housing. This list is intended as a guide. The features described are those we might look for in universal housing but not all are expected to be included in any given home.

Some are finite recommendations, some are lists of options, and some are scope statements identifying how many particular features must or should be included. Obviously, the more universal design characteristics or features included, the more usable the house.

A key component of universal design is the market appeal it adds to the home because the universal features are integrated into the overall design. Done well, universal design becomes a virtually invisible element.

This list contains structural and non-structural features. Structural features, indicated by **%**, should be considered for new homes and major renovations. Non-structural features, indicated by O, are less expensive and easier to incorporate into a finished home.

CHARACTERISTICS

Entrances

Stepless Entrances

- * It is best to make all home entrances stepless.
- More than one stepless entrance is preferred.
- * At least one stepless entrance is essential; if only one, not through a garage or from a patio or raised deck.

Site Design Methods for Integrated Stepless Entrances

- * Level bridges to uphill point.
- Triveway and garage elevated to floor level so vehicles do the climbing.
- * Earth berm and bridge with sloping walk.
- Site grading and earth work (with foundation waterproofing) and sloping walks at 1:20 maximum slope.
- * Avoid ramps. If ramps are used, integrate into the design.

BENEFITS

Easier to move furniture and appliances in and out.

Great for baby strollers and bicycles.

Easier to bring in groceries and packages.

Safer in wet or icy condtions.

Easier to clear snow, ice and leaves.

Easier than steps to repair and maintain.

Slope of route is shallow making travel from parking to door easier.

BENEFITS

Other Entrance Features

- One-half inch maximum rise at entrance thresholds.
- Minimum 5' x 5' level clear space inside and outside entry door. (Can be smaller if automatic power door provided.)
- Power door operators whenever possible.
- Weather protection such as a porch, stoop with roof, awning, long roof overhang, and/or carport.
- Built-in shelf, bench or table with knee space below located outside the door.
- * Full length sidelights, windows in doors, and/or windows nearby.
- Wide-angle viewers and TV monitors.
- Lighted doorbell at a reachable height, intercom with portable telephone link, and/or hardwired intercom.
- Light outside entry door and motion detector controlled lights.
- House number should be large, high contrast, located in a prominent place.

Interior Circulation

- * An open plan design.
- * At least one bedroom and accessible bathroom should be located on an accessible ground floor entry level (same level as kitchen, living room, etc.).

Reduces tripping hazards.

Dollies and handtrucks move over easily.

Allows for maneuvering while opening or closing door.

Provides sheltered space for people while unlocking the door, waiting for a carpool, making deliveries, etc.

Less weather damage to door finish.

Provides a place to put packages while opening doors.

Allows all residents, including children and people using wheelchairs to see who is at the door before opening it.

Allows visitors to communicate with residents.

Veiw of approaching visitors.

Adds general illumination and sense of security. Illuminates lockset.

Eliminates dark approaches to the home.

Easy for friends and emergency personnel to locate residence.

Minimizes hallways and doorways and maximizes sight lines.

- ★ Clear door opening width (32" minimum, 34" 36" wide doors), for all doorways.
- * Flush thresholds at all doorways.
- * Clear floor space (18" minimum) beside door on pull side at latch jamb.
- **☆** Circulation route 42" minimum width.
- ★ Turning space in all rooms (5' diameter).

Vertical Circulation

All stairs should be appropriate width and have space at the bottom for later installation of a platform lift, if needed.

If a two-story dwelling:

* at least one set of stacked closets, pantries, or storage spaces with knock-out floor

OR

- * a residential elevator with minimum 3' x 4' clear floor area installed at the time of initial construction.
- Stair handrails to extend horizontally beyond top and bottom risers.

Bathrooms

When more than one bathroom is provided, all should meet the following criteria, including bathrooms on the second floor.

- * At least one bathroom must have one of the following accessible bathing fixtures:
 - minimum 5' x 3' (4' preferred), curbless shower

OF

• tub with integral seat, waterproof floor, and a floor drain.

BENEFITS

Improves circulation, especially with many visitors, such as at parties.

Reduces damage to door jambs when moving large furniture or appliances, equipment, ladders.

Provides space to move out of the way of the door swing when pulling it open.

Provides maneuvering room in the hallways and archways.

Easy access between floors.

Becomes shaft for later elevator installation- at a great cost savings.

Steady users at top and bottom of stairs

- A Other bathrooms in the same house may have a tub with an integral seat or a 3' x 3' transfer shower with "L" shaped folding seat and 1/2" maximum lip (curb) in lieu of fixtures described above. When possible, arrange at least one shower control for right-hand use and one for left-hand use.
- Adequate maneuvering space: 60" diameter turning space in the room and 30" x 48" clear floor spaces at each fixture. Spaces may overlap.
- Clear space (3') in front and to one side of toilet.
- * Toilet centered 18" from any side wall, cabinet, or tub.
- * Broad blocking in walls around toilet, tub, and shower for future placement and relocation of grab bars.
- Grab bars should not be stainless steel or chrome. Use colors to match decor.
- * Lavatory counter height 32" minimum.
- Knee space under lavatory (29" high).
 May be open knee space or achieved by means of removable vanity or fold-back or self-storing doors. Pipe protection panels must be provided to prevent contact with hot or sharp surfaces.
- Countertop lavatories preferred with bowl mounted as close to front edge as possible.
- Wall hung lavatories acceptable with appropriate pipe protection.
- Pedestal lavatories are not acceptable.

BENEFITS

Allows people to sit in tub/shower without needing additional equipment.

Allows for easy maneuvering to and around toilet.

Provides space for transfers to and from toilet.

Allows for custom placement of grab bars after construction without opening wall to add blocking.

Grab bars make it easier and safer for everyone to get in and out of the tub or shower.

Grab bars also double as towel bars but are more durable.

Allows someone to use lavatory from a seated position.

- Long mirrors should be placed with bottom no more than 36" above finished floor and top at least 72" high.
- o Full-length mirrors are good choices.

Fixture Controls

- ★ Offset controls in tub/shower with adjacent clear floor space.
- Single-lever water controls at all plumbing fixtures and faucets.
- Pressure balanced anti-scald valves at tubs and showers.
- Adjustable height, movable hand-held shower head or 60"-72" flexible hose allows easy use by people of all heights.
- Hand-held shower heads in all tubs and showers, in addition to fixed heads, if provided. Single-lever diverter valves if needed.
- Mixer valve with pressure balancing and hot water limiter.

Kitchens

- Space between face of cabinets and cabinets and walls should be 48" minimum.
- Clear knee space (minimum 29" high) under sink (must have pipe protection), counters, and cook tops. May be open knee space or achieved by means of removable base cabinets or fold-back or self-storing doors.

BENEFITS

Children and persons seated can use mirror while at sink.

Reduces water damage to wall finish behind sink.

Makes it easier to clean behind faucet.

Makes room seem more spacious.

Allows for easy access from outside the tub/shower reducing reaching and bending, without inconvenience when inside.

Can be adjusted to the height of each user.

Helps avoid wetting hairstyle, bandages, casts.

Can be used for back massage, rinsing hair, washing the dog, etc.

Prevents scalding people who cannot move out of the way quickly if water temperature and/or pressure change suddenly.

Saves hot water.

Provides open storage space for serving cart, trash can, recycle bins, etc.

Permits sitting on a stool to work at the sink or cooktop.

- ★ Variable height (28"- 42") work surfaces such as countertops, sinks, and or cooktops. May be mechanically adjustable in 2" increments or be electrically powered, through a continuous range.
- Contrasting color border treatment on countertops.
- ★ Stretches of continuous countertops particularly between refrigerator, sink, and stove top.
- o Adjustable height shelves in wall cabinets.
- Full-extension, pull-out drawers, shelves and racks in base cabinets.
- ★ Full height pantry storage with easy access pull-out and/or adjustable height shelves.
- Front-mounted controls on all appliances.
- Cooktop or range with staggered burners and front or side-mounted controls.
- Glare-free task lighting to illuminate work areas without too much reflectivity.
- Side-by-side refrigerator with pull out shelving.

OR

Under counter or drawer type refrigerators installed on raised platforms.

BENEFITS

Allows tall people to work without excessive bending by briniging work closer to user.

More usable by children, and shorter adults, so the whole family can help with meal preperation.

Allows person to work while seated.

Provides built-in desk in kitchen.

Makes it easier to detect the edge of counters and reduces likelihood of spills.

Makes it easier to repair damaged edges without matching entire countertop.

Allows sliding of heavy items, and easy, onelevel food flow.

Easy reach to all storage space.

Easier to maneuver large items in and out of cabinets.

Makes storage at all heights reachable.

Provides maximum storage capacity

Facilitates easy reach.

Eliminates dangerous reaching over hot burners reducing the chance of burns and spills.

Allows easy reach of otherwise hard-to-get items.

Provides optimum access to storage space between 18" and 48" high.

- ★ Built-in oven with knee space beside, set for one pull-out oven rack at the same height as adjacent countertop.
- Drop-in range with knee space beside, top set at 34" above finished floor.
- Dishwasher raised on a platform or drawer unit, so top rack is level with adjacent countertop.
- Single-lever water controls at all plumbing fixtures and faucets.

Laundry Areas

- Front-loading washers and dryers, with front controls, raised on platforms.
- Laundry sink and countertop surface no more than 34" above finished floor with knee space below.
- * Clear floor space 36" wide across full width in front of washer and dryer and extending at least 18" beyond right and left sides. (Extended space can be part of knee space under counter tops, sink, etc.)

Storage

- ★ 50% of all storage should be less than 54" high.
- Adjustable height closet rods and shelves.
- o Power operated clothing carousels.
- Motorized cabinets that raise and lower.

BENEFITS

Transfer dishes from oven to counter without lifting or reaching.

Places racks within easy reach requiring less bending.

Easier to adjust water temperature and volume.

Can operate with a single hand or elbow.

Single-lever contols with fewer parts are less costly to repair, maintain and clean.

Reduces the need to bend, stoop, or lean over to reach clothes.

Easier to access appliances from seated position.

More flexible storage space.

Increased storage space if using double closet rod.

Accomodates height and reach of specific users, including children.

BENEFITS

Garages And Carports

- Power operated overhead doors.
- * 8' minimum door height or alternate onsite parking for tall vehicles.
- * Extra length and width around cars.
- ★ Sloping garage floor (with through-thewall vents at bottom of slope to release fumes) in lieu of stepped entrance with ramp from garage to house interior.
- Avoid ramps in garages.

Improved circulation and access to parked cars.

Decks

- **★** Build deck at same level as house floor.
- * Keep deck clear of the house and use slatted decking for positive drainage.

Hardware

- lever door handles
- push plates
- loop handle pulls on drawers and cabinet doors—no knobs
- o touch latches
- magnetic latches in lieu of mechanical locks

Home Automation

- Motion detector light switches in garages, utility spaces, entrances, and basements.
- o Remote controls for selected lights.
- Remote controls for heating and cooling.
- Doorbell intercoms that connect to portable telephones.
- Audible and visual alarms for doorbell, baby monitor, smoke detectors, etc.

Easy to operate with elbow or knee if hands are full.

Requires little or no strength or twisting.

Alarms noticable even if person is unable to hear because of other noise or hearing loss.

O Non-structural Feature

BENEFITS

surfaces and walls.

Allows easy recognition of the junction of floor

Light and Color

 Color contrast between floor surfaces and trim. Avoid glossy surfaces.

- Color contrast difference between stair treads and risers.
- Emphasize lighting at stairs, entrances and task lighting.
- o Ambient, focused, and variable lighting.
- Contrast between countertops and front edges or cabinet faces.

Allows adjustment to suit demands of task.

Switches and Controls

- Light switches 44"- 48" high, and thermostats 48" maximum height.
- Easy-touch rocker or hands free switches. (See Home Automation.)
- Electrical outlets at beds and desks, fourplex boxes each side for computer and electronic equipment as well as personal use equipment.
- Electrical outlets, 18" minimum height.
- ★ Electrical panel with top no more than 54" above floor located with a minimum 30" x 48" clear floor space in front.

Easier to reach with hands full (e.g. with elbow).

More accessible to children.

Easier to reach without bending and from seated position.

Users are less likely to unplug appliances by pulling on cord.

BENEFITS

Windows

★ Windows for viewing, 36" maximum sill height.

- ★ Use casement, awning, hopper, or jalousie style windows.
- Use crank operated style and power operators whenever possible.

Sliding Doors

- * Exterior sliding doors: drop frame and threshold into subfloor to reduce height of track, or ramp the finished floor to top of track.
- ★ Interior pocket doors: when fully open door should extend 2" minimum outside doorjamb and be equipped with openloop handles for easy gripping.
- ★ By passing closet doors: each panel should create an opening at least 32" clear.

Can look out from seated position.

Longer length windows add more natural light and elegance to rooms.

Reduce reaching to open, close, and lock windows.

UNIVERSAL PRODUCT CHARACTERISTICS

The Universal Design Product Characteristics below lists features to consider when selecting home architectural products, appliances and fixtures. Our goal is to promote the selection and use of products that are well designed, attractive, and have easy-to-us features that result in a convenient, comfortable and safe home environment for people of all ages and abilities.

Some features may work well for some needs but may be a problem for others. For example, smooth stovetops help many with hand or arm limitations cook more easily and safely by allowing for the sliding of pots on and off the heat element. However, smooth tops may provide insufficient visual cueing for those with vision problems. Few products will have all the features listed. Use this list to select features that best meet individual needs.

CONTROLS	DISPLAY / LABELS	OTHER FEATURES
Microwave Oven		
 Raised, cupped or otherwise detectable by touch Easily programmable settings Can be used with low effort and with minimum finger use Minimal programming required 	 High contrast graphics (white on black) 1/4" or larger lettering Redundant signals, visual and alarms 	 Microwave/convection combination No lip at front edge Lighted interior
Ranges		
 Front or side mounted Raised, cupped or otherwise detectable by touch Can be used with low effort and minimum finger use Clear relationship to function (how it works and what it operates) 	 High contrast graphics (white on black) I/4" or larger lettering Redundant signals, visual and audible alarms 	 Off set burners Smooth cook top "Cool" cook top burners Automatic shut off function
